# 1 Algorithms

## 1.1 Mo's algorithm

```

const int MN = 5 * 100000 + 100;
const int SN = 708;

struct query {
    int a, b, id;
    query() {}
    query(int x, int y, int i) : a(x), b(y), id(i) {}

    bool operator < (const query &o) const {
        return b < o.b;
    }
};

vector<query> s[SN];
int ans[MN];

struct DS {

    void clear() {}
    void insert(int x) {}
    void erase(int x) {}
    long long query() {}
};

```

```

DS data;

int main() {
    int n, q;
    while (cin >> n >> q) {
        for (int i = 0; i < SN; ++i)
            s[i].clear();

        vector<int> a(n);
        for (auto &i : a) cin >> i;

        for (int i = 0; i < q; ++i) {
            int b, e;
            cin >> b >> e;
            b--; e--;
            s[b / SN].emplace_back(b, e, i);
        }

        for (int i = 0; i < SN; ++i) {
            if (s[i].size())
                sort(s[i].begin(), s[i].end());
        }

        for (int b = 0; b < SN; ++b) {
            if (s[b].size() == 0) continue;
            int i = s[b][0].a;
            int j = s[b][0].a - 1;

            data.clear();
            for (int k = 0; k < (int)s[b].size(); ++k) {
                int L = s[b][k].a;
                int R = s[b][k].b;

                while (j < R) {
                    j++;
                    data.insert(a[j]);
                }

                while (j > R) {
                    data.erase(a[j]);
                    j--;
                }

                while (i < L) {

```

```

        data.erase(a[i]);
        i++;
    }

    while (i > L) {
        i--;
        data.insert(a[i]);
    }
    ans[s[b][k].id] = data.query();
}

for (int i = 0; i < q; ++i) {
    cout << ans[i] << endl;
}

return 0;
};

```

---

## 1.2 sliding window

---

```

/*
 * Given an array ARR and an integer K, the problem boils down to
 * computing for each index i: min(ARR[i], ARR[i-1], ..., ARR[i-K+1]).
 * if mx == true, returns the maximum.
 * http://people.cs.uct.ac.za/~ksmith/articles/sliding_window_minimum.html
 */

vector<int> sliding_window_minmax(vector<int> & ARR, int K, bool mx) {
    deque< pair<int, int> > window;
    vector<int> ans;
    for (int i = 0; i < ARR.size(); i++) {
        if (mx) {
            while (!window.empty() && window.back().first <= ARR[i])
                window.pop_back();
        } else {
            while (!window.empty() && window.back().first >= ARR[i])
                window.pop_back();
        }
        window.push_back(make_pair(ARR[i], i));
    }
}

```

```

while(window.front().second <= i - K)
    window.pop_front();

ans.push_back(window.front().first);
}
return ans;
}

```

---

## 2 Data structures

### 2.1 STL Treap

---

```

#include <ext/rope> //header with rope
using namespace std;
using namespace __gnu_cxx; //namespace with rope and some additional stuff
int main()
{
    ios_base::sync_with_stdio(false);
    rope<int> v; //use as usual STL container
    int n, m;
    cin >> n >> m;
    for(int i = 1; i <= n; ++i)
        v.push_back(i); //initialization
    int l, r;
    for(int i = 0; i < m; ++i)
    {
        cin >> l >> r;
        --l, --r;
        rope<int> cur = v.substr(l, r - l + 1);
        v.erase(l, r - l + 1);
        v.insert(v.mutable_begin(), cur);
    }
    for(rope<int>::iterator it = v.mutable_begin(); it !=
        v.mutable_end(); ++it)
        cout << *it << " ";
    return 0;
}

```

---

### 2.2 STL order statistics tree II

---

```

#include <bits/stdc++.h>
#include <ext/pb_ds/assoc_container.hpp>
#include <ext/pb_ds/tree_policy.hpp>

using namespace std;
using namespace __gnu_pbds;

typedef tree<int,null_type,less<int>,rb_tree_tag,
tree_order_statistics_node_update> order_set;

order_set X;

int get(int y) {
    int l=0,r=1e9+1;
    while(l<r) {
        int m=l+((r-l)>>1);
        if(m-X.order_of_key(m+1)<y)
            l=m+1;
        else
            r=m;
    }
    return l;
}

main(){
    ios::sync_with_stdio(0);
    cin.tie(0);
    int n,m;
    cin>>n>>m;

    for(int i=0;i<m;i++) {
        char a;
        int b;
        cin>>a>>b;
        if(a=='L')
            cout<<get(b)<<endl;
        else
            X.insert(get(b));
    }
}

### 3.4 triangles

Let  $a, b, c$  be length of the three sides of a triangle.

$$p = (a + b + c) * 0.5$$

The inradius is defined by:

$$iR = \sqrt{\frac{(p-a)(p-b)(p-c)}{p}}$$

The radius of its circumcircle is given by the formula:

$$cR = \frac{abc}{\sqrt{(a+b+c)(a+b-c)(a+c-b)(b+c-a)}}$$

## 4.5 konig's theorem

In any bipartite graph, the number of edges in a maximum matching equals the number of vertices in a minimum vertex cover

## 4.6 minimum path cover in DAG

Given a directed acyclic graph  $G = (V, E)$ , we are to find the minimum number of vertex-disjoint paths to cover each vertex in  $V$ .

We can construct a bipartite graph  $G' = (V_{out} \cup V_{in}, E')$  from  $G$ , where :

$$V_{out} = \{v \in V : v \text{ has positive out-degree}\}$$

$$V_{in} = \{v \in V : v \text{ has positive in-degree}\}$$

$$E' = \{(u, v) \in V_{out} \times V_{in} : (u, v) \in E\}$$

Then it can be shown, via König's theorem, that  $G'$  has a matching of size  $m$  if and only if there exists  $n - m$  vertex-disjoint paths that cover each vertex in  $G$ , where  $n$  is the number of vertices in  $G$  and  $m$  is the maximum cardinality bipartite matching in  $G'$ .

Therefore, the problem can be solved by finding the maximum cardinality matching in  $G'$  instead.

**NOTE:** If the paths are not necessarily disjoint, find the transitive closure and solve the problem for disjoint paths.

## 4.7 planar graph (euler)

Euler's formula states that if a finite, connected, planar graph is drawn in the plane without any edge intersections, and  $v$  is the number of vertices,  $e$  is the number of edges and  $f$  is the number of faces (regions bounded by edges, including the outer, infinitely large region), then:

$$f + v = e + 2$$

It can be extended to non connected planar graphs with  $c$  connected components:

$$f + v = e + c + 1$$

## 5 Math

### 5.1 Lucas theorem

For non-negative integers  $m$  and  $n$  and a prime  $p$ , the following congruence relation holds :

$$\binom{m}{n} \equiv \prod_{i=0}^k \binom{m_i}{n_i} \pmod{p},$$

where :

$$m = m_k p^k + m_{k-1} p^{k-1} + \dots + m_1 p + m_0,$$

and :

$$n = n_k p^k + n_{k-1} p^{k-1} + \dots + n_1 p + n_0$$

are the base  $p$  expansions of  $m$  and  $n$  respectively. This uses the convention that  $\binom{m}{n} = 0$  if  $m < n$ .

### 5.2 cumulative sum of divisors

/\*\*  
The function SOD(n) (sum of divisors) is defined  
as the summation of all the actual divisors of  
an integer number n. For example,

$$\text{SOD}(24) = 2+3+4+6+8+12 = 35.$$

The function CSOD(n) (cumulative SOD) of an integer n, is defined as  
below:

$$\text{csod}(n) = \sum_{i=1}^n \text{sod}(i)$$

It can be computed in  $O(\sqrt{n})$ :  
\*/

```

long long csod(long long n) {
    long long ans = 0;
    for (long long i = 2; i * i <= n; ++i) {
        long long j = n / i;
        ans += (i + j) * (j - i + 1) / 2;
        ans += i * (j - i);
    }
    return ans;
}

```

### 5.3 fft

```

/**
 * Fast Fourier Transform.
 * Useful to compute convolutions.
 * computes:
 *   C(f star g)[n] = sum_m(f[m] * g[n - m])
 * for all n.
 * test: icpc live archive, 6886 - Golf Bot
 * */

## 5.4 fibonacci properties

Let A, B and n be integer numbers.

$$k = A - B \quad (1)$$

$$F_A F_B = F_{k+1} F_A^2 + F_k F_A F_{A-1} \quad (2)$$

$$\sum_{i=0}^n F_i^2 = F_{n+1} F_n \quad (3)$$

$ev(n)$  = returns 1 if  $n$  is even.

$$\sum_{i=0}^n F_i F_{i+1} = F_{n+1}^2 - ev(n) \quad (4)$$

$$\sum_{i=0}^n F_i F_{i-1} = \sum_{i=0}^{n-1} F_i F_{i+1} \quad (5)$$

## 5.5 sigma function

the sigma function is defined as:

$$\sigma_x(n) = \sum_{d|n} d^x$$

when  $x = 0$  is called the divisor function, that counts the number of positive divisors of  $n$ .

Now, we are interested in find

$$\sum_{d|n} \sigma_0(d)$$

if  $n$  is written as prime factorization:

$$n = \prod_{i=1}^k P_i^{e_k}$$

we can demonstrate that:

$$\sum_{d|n} \sigma_0(d) = \prod_{i=1}^k g(e_k + 1)$$

where  $g(x)$  is the sum of the first  $x$  positive numbers:

$$g(x) = (x * (x + 1)) / 2$$

## 6 Matrix

### 6.1 matrix

```

const int MN = 111;
const int mod = 10000;

struct matrix {
